Factor

```
ant$habitat <- factor(ant$habitat)

print(ant$habitat)

 [1] forest forest forest forest forest ...
[14] forest forest forest forest forest ...
[27] bog     bog     bog     bog     bog     bog ...
[40] bog     bog     bog     bog     bog
Levels: bog forest
```

R data structure for categorical variables; ?factor
Attribute: levels (sorted alphabetically by default)
Works seamlessly with R regression model syntax and
plotting functions
